This course will address different aspects of phonological, grammatical, and pragmatic variation, and language contact, focusing on key issues such as identifying variables, circumscribing the variable context, extracting, coding and analysing data using GoldVarb X, and examining social and linguistic factors that condition linguistic variation. We will also look at the language use in the Chinese speech community and examine the implications of variation for SLA theory. Students will also apply the insights gleaned to an original study of a linguistic variable of their choice.</p>
